BAANZON CHAT

FULL BRAND KIT

Brand identity specification | Version 1.0 | October 2026

Status: Working specification. Final logo artwork and trademark clearance are pending.

1. Brand foundation

• Brand name: BAANZON CHAT

• Parent brand: OPRAIZ. The OPRAIZ parent identity remains unchanged.

• Product category: AI assistant and multimodal conversational AI product.

• Brand ambition: Build a recognisable AI product identity that feels premium, capable and contemporary without resembling generic AI assistant branding.

• Brand promise: Powerful assistance, presented with clarity.

• Personality: intelligent, confident, premium, modern, approachable and technically credible.

• Core design principle: Recognisable through form, not effects.

2. Positioning and messaging

• Positioning: BAANZON CHAT is an AI assistant from OPRAIZ designed to support thinking, writing, research, analysis, coding and practical work, subject to implemented product capabilities.

• Primary message: An AI assistant for thinking and doing.

• Message pillars: THINK (reasoning and problem-solving); CREATE (writing and ideation); BUILD (coding and technical assistance); DISCOVER (research and synthesis); WORK (practical workflows where supported).

• Messaging rule: Do not use unsupported claims such as perfect accuracy, guaranteed results, unlimited intelligence or superiority over every competitor.

3. Logo system — provisional

• Selected creative architecture: Intelligence Object / Sculpted Frame / Signature Cut.

• S3-A Controlled Opening: simpler silhouette with one purposeful opening.

• S3-B Offset Core: more distinctive internal structure and a stronger potential signature.

• Neither concept is final or approved for commercial use.

• Required variants after approval: horizontal, stacked, standalone emblem, wordmark-only, monochrome black, monochrome white, light background, dark background, application icon and favicon.

• Do not stretch, rotate, recolour arbitrarily, add glow, change geometry or combine with the OPRAIZ mark into an unapproved composite.

4. Colour system — working palette

• Graphite #303438 — primary brand anchor, dark surfaces and major typography.

• Celadon #B7D6C3 — signature accent and selected highlights.

• Soft White #F0F0E9 — light surfaces and reverse-logo applications.

• Steel #70777B — supporting neutral where contrast permits.

• These values are provisional. Verify contrast for all text, icons, controls and states before production.

5. Typography

• Logo: custom vector lettering based on a geometric sans-serif foundation. Explore B, A, Z and N letterforms.

• BAANZON is the dominant wordmark; CHAT is the supporting descriptor.

• Product UI: legible sans-serif with broad language support, clear numeric forms and reliable rendering on desktop and mobile.

• Optional monospaced companion for code and technical content.

• Confirm typeface licensing, weights, line heights, tracking and accessibility during implementation.

6. Graphic language and iconography

• Use controlled geometry, deliberate spacing, clean edges, consistent corner treatment, clear alignment and restrained negative space.

• Iconography should use consistent visual weight, clear silhouettes and small-size legibility.

• Avoid generic AI stock imagery, glowing spheres, random gradients, excessive glassmorphism, decorative particle clouds and overcomplicated diagrams.

7. Motion and animation

• Motion personality: controlled, responsive, composed and purposeful.

• Use short transitions, subtle active-state emphasis, progress animation and voice activity visualisation only when useful.

• Respect reduced-motion preferences. Do not delay essential actions or use animation as the sole status indicator.

• Final motion timings and easing should be specified after the emblem is approved.

8. Product interface direction

• Light theme: Soft White surfaces, Graphite typography, restrained Celadon accents and clear neutral divisions.

• Dark theme: Graphite-based surfaces, readable light text and controlled Celadon accents.

• Design explicit empty, loading, success, error, offline, permission, upload and unavailable-feature states.

• Make capabilities, limitations, permissions, data handling and action confirmations clear.

9. Brand voice

• Voice: clear, capable, thoughtful, direct and approachable.

• Lead with the user's goal. Prefer concrete benefits to abstract superlatives. Explain limitations honestly.

• Preferred example: Explore the problem, compare approaches and develop your next step.

• Avoid exaggerated claims about perfect results, limitless capability or universal superiority.

10. Digital and marketing applications

• Website: clear positioning, accurate capability descriptions, genuine product screenshots and obvious calls to action.

• Social media: templates for product announcements, features, tutorials, updates and customer stories.

• Presentations and email: consistent hierarchy, accessible contrast, restrained layouts and approved logo placements.

• Clearly label prototypes and mockups; do not present fabricated UI as an available feature.

11. Parent-brand relationship

• BAANZON CHAT is a product of OPRAIZ.

• Keep the OPRAIZ logo unchanged. Communicate the parent relationship through approved endorsement language and designated placements.

• Do not combine the OPRAIZ ring mark with the BAANZON emblem into an unapproved composite logo.

12. Trademark and originality programme

• Search BAANZON and BAANZON CHAT as word marks.

• Search visually similar emblem constructions separately from the word mark.

• Review relevant software, AI and communications categories.

• Intended territories: Malaysia, India, United States and European Union.

• Review domain names and social handles; obtain professional legal advice before filing or relying on exclusivity.

• No trademark search, legal clearance, uniqueness or freedom-to-operate conclusion is claimed in this package.

13. Production asset package

• Planned final outputs: editable SVG masters, vector PDF, transparent PNG exports, app icons, monochrome variants, lockups, templates and brand guideline files.

• Maintain editable source files and documented export settings.

• Do not treat the included concept diagrams as approved production logos.

14. Approval gates

• Gate 1: Compare S3-A and S3-B using flat vector geometry, silhouette, small-size clarity and monochrome reproduction.

• Gate 2: Refine custom wordmark, spacing, hierarchy and lockups.

• Gate 3: Validate colours, typography, iconography, motion and interface applications.

• Gate 4: Conduct similarity research and obtain appropriate legal review.

• Gate 5: Prepare final master assets, exports, templates and usage documentation.

• Do not mark a gate complete until evidence has been reviewed.

15. Open decisions

• Final emblem geometry: pending.

• Final wordmark: pending.

• Logo lockup proportions: pending.

• Typeface and licensing: pending.

• Clear-space and minimum-size values: pending.

• Accessibility validation: pending.

• Motion specification: pending.

• Trademark search findings: pending.

• Final production artwork: pending.

Colour system
